Labour Force Statistics ◆ September 2006

HIGHLIGHTS

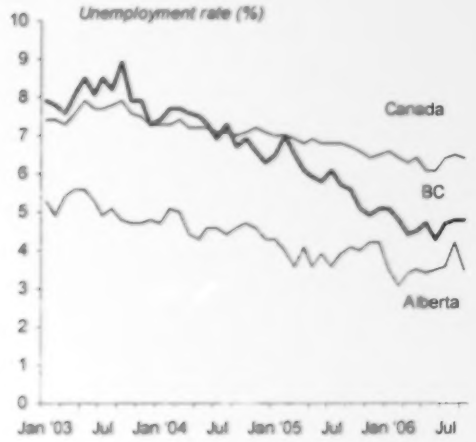
All labour force statistics are seasonally adjusted, unless otherwise indicated

Jobless rate remains steady in September

British Columbia's unemployment rate remained at 4.8% in September, unchanged from August as both the number of jobs and the number of people who were either working or looking for work edged up 0.3%.

BC's unemployment rate remained well below the national average of 6.4%, marginally higher than that of Manitoba (4.4%) and Saskatchewan (4.3%), but significantly above Alberta's 3.5% jobless rate. The low unemployment rates in the western provinces reflect the shortage of labour in Western Canada, particularly in Alberta.

Labour shortages in Western Canada are reflected in lower unemployment rates

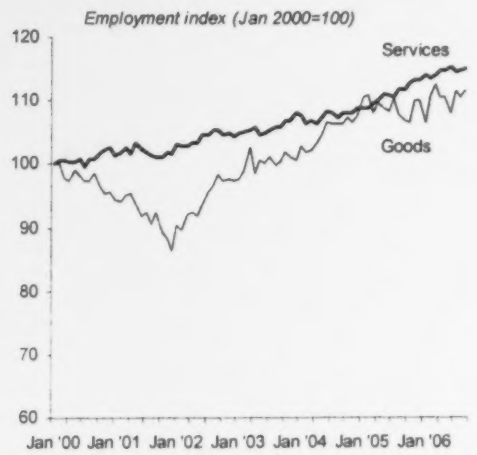


British Columbia's participation rate climbed slightly in September with 65.6% of the working age population (15 and older) in the labour force, an increase of 0.1 percentage points over August. However, despite the demand for labour, British Columbia's participation rate remains significantly lower than the overall Canadian rate of 67.0%.

Jobs rebound in goods industries; service sector employment is fairly flat

Employment in the goods sector rebounded from a 1.0% drop in August with an equivalent rise in September. A 5.4% jump in employment in the resource sectors (forestry, fishing and mining) was responsible for much of the increase, along with a 1.3% rise in manufacturing jobs. The number of jobs in construction fell 0.4%, while employment in utilities dropped (-1.1%) for the second consecutive month.

Employment in goods industries has been much more volatile compared to services



There was a marginal increase in employment (+0.2%) in the service sector, as strong job growth in some industries, such as public ad-

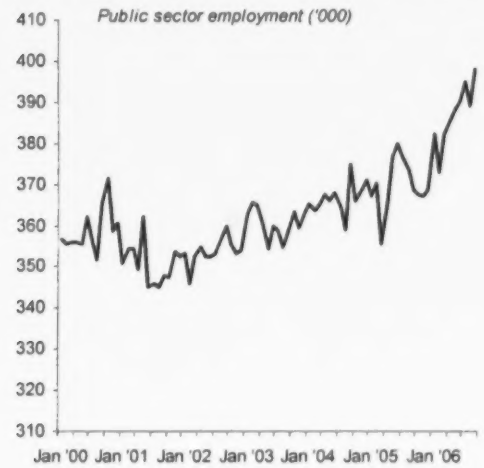
2007-01723/

ministration (+4.2%) and management & administration (+6.0%), was mostly offset by declines in others, such as professional, scientific & technical services (-2.1%) and finance, insurance & real estate (-2.8%).

There were more jobs for both men (+0.1%) and women (+0.6%) in September and in both cases, the higher employment numbers were attributable to more full-time employment. Overall employment in full-time positions rose 0.6%, while the number of part-time jobs slipped 0.8%. The number of women in full-time jobs climbed 1.0%, while 0.3% more men worked full-time.

Employment in the public sector surged 2.3%, but there was a 0.2% decline in private sector jobs. Meanwhile, the number of self-employed in the province edged up 0.4%, the third straight monthly increase.

Public sector employment has been on the rise



Unemployment up in most regions

Among British Columbia's regions, jobless rates ranged from a low of 4.2% (*3-month moving average, unadjusted*) in Northeast to a high of 6.5% in North Coast/Nechako. While Kootenay shaved an entire percentage point off its unemployment rate, to 5.1%, most other regions saw unemployment rise. Thompson-Okanagan was the only other region where unemployment fell (to 5.7%). North Coast/Nechako experienced the largest jump in unemployment with the rate rising 0.9 points to 6.5%. Rates in Mainland/Southwest (4.7%) and Vancouver Island/Coast (4.9%) remained lower than most of the province, but were higher than they were in August.

The unemployment rate in Vancouver jumped to 4.5% (*seasonally adjusted*) from 3.8% in the previous month, while the Abbotsford metropolitan area saw its rate drop to 3.7% from 4.2% in August. Victoria's unemployment rate remained unchanged, at 3.9%.

The Nation

Canada's unemployment rate edged down to 6.4% in September as the number of jobs climbed slightly (+0.1%), while the size of the labour force remained virtually unchanged. Unemployment rates climbed slightly in Ontario and Quebec, but were down or flat in the rest of the country.

NOTES: 1. Occupation specific Unemployment Rates include only those unemployed who worked in the past year. The "All Occupations" rate incorporates total unemployed persons which includes an "Occupation Unclassified" category.

2. Due to the relatively small sample sizes from which disaggregated data are derived, caution should be used in the interpretation of month-to-month changes in the estimates.

Labour Force Statistics

This report is based on statistics from the Labour Force Survey produced monthly by Statistics Canada. Questions and comments should be directed to Data Services at (250)387-0327 or write to BC.Stats@gov.bc.ca.

Definitions and Explanatory Notes

Reference Week

Monthly estimates of employment, unemployment, and persons not in the labour force refer to the specific week covered by the survey each month, normally the week containing the 15th day.

Labour Force

The labour force is composed of those members of the civilian non-institutional population 15 years of age and over who, during the reference week, were employed or unemployed.

Employed

Employed persons are those who, during the reference week, either: (a) did any work at all, or (b) had a job but were not at work due to own illness or disability, personal or family responsibilities, bad weather, labour dispute, vacation, or other reason not specified above (excluding persons whose job attachment was to a job to start at a definite date in the future).

Unemployment

Unemployed persons are those who, during the reference week, either: (a) were without work, had actively looked for work in the past four weeks (ending with the reference week), and were available for work; or (b) had not actively looked for work in the past four weeks but had been on layoff and were available for work; or (c) had not actively looked for work in the past four weeks but had a new job to start in four weeks or less from the reference week, and were available for work.

Unemployment Rate

The unemployment rate represents the number of unemployed persons expressed as a per-centage of the labour force. The unemployment rate for a particular group (age, sex, marital status, etc.) is the number of unemployed in that group expressed as a percentage of the labour force for that group.

Participation Rate

The participation rate represents the labour force expressed as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex, marital status, etc.) is the labour force for that group expressed as a percentage of the population for that group.

Employment Rate

The employment rate(employment/population ratio) is the number of employed persons expressed as a percentage of the population 15 years of age and over. The employment rate for a particular group (age, sex, marital status, etc.) is the employment for that group expressed as a percentage of the population for that group.

Rounding

Estimates published by the Labour Force Survey are rounded to the nearest thousand but all derived values (totals, averages, rates, ratios, percent changes, etc.) are calculated from unrounded figures. Therefore, the sum of the individual rounded items may not equal the total. Unadjusted estimates rounded to hundreds are available from BC STATS on request.

Seasonal Adjustment

Fluctuations in economic time series are caused by seasonal, cyclical and irregular movements. A seasonally adjusted series is one from which seasonal movements have been eliminated. Seasonal movements are defined as those which are caused by regular annual events such as climate, holidays, vacation periods, and cycles related to crops, production and retail sales associated with Christmas and Easter. It should be noted that the seasonally adjusted series contain irregular as well as longer-term cyclical fluctuations.
